RESUME SUMMARY

Electronics and Communication Engineering undergraduate at Kongu Engineering College (Class of 2028) with hands-on experience in PCB Designing, Embedded Systems, IoT, and Web Development. Developed real-world projects including an IoT-based wearable safety monitoring device and an ESP32-powered Smart Energy Meter with cloud dashboard integration. Proficient in microcontroller programming, sensor integration, and wireless data communication.

SKILLS

- PCB Design & Layout
- Embedded Systems Programming
- Internet of Things (IoT)
- ESP32 / Arduino / Microcontroller Programming
- Web Development
- C/C++ Programming
- Real-Time Monitoring Systems
- IoT Dashboard (Blynk)

EDUCATION

B.Tech / B.E. — Electronics and Communication Engineering

Kongu Engineering College, Erode

Graduating in 2028 | CGPA: 7.6 / 10

Class XII — Tamil Nadu State Board

Saratha Matric Higher Secondary School, Gobichettipalayam, Erode

2024 | 79.8%

Class X — CBSE

Saratha International Senior Secondary School, Kodiveri, Erode

2022 | 72%

LANGUAGES KNOWN

English and Tamil

CO-CURRICULAR ACTIVITIES

- Embedded Systems and PCB Designing using Altium Designer.
- Event Management at Tamil Mandram (2024 – Present).
- Preparing for Government Exams.
- Playing Cricket and Learning New Things.
- Learning German Language.

PROJECTS

Integrated Wearable Device for Real-Time Health, Gas, and Fatigue Monitoring

November 2025 – December 2025

- Engineered an IoT-based wearable safety device for industrial workers, monitoring heart rate, body temperature, blood oxygen, and hazardous gas exposure in real time.
- Implemented fatigue detection algorithms using motion and physiological sensor data, with instant alerts via buzzer, vibration, and wireless communication modules.
- Integrated multiple sensors with microcontroller programming for data acquisition and wireless monitoring, enhancing occupational safety and response time.

Smart Energy Meter (IoT-Based)

August 2025

- Designed and developed an ESP32-based Smart Energy Meter to monitor voltage, current, power, and energy consumption in real time.
- Built a live IoT dashboard using Blynk for remote monitoring, historical trend analysis, and threshold-based alerts via Wi-Fi.
- Improved energy efficiency through continuous monitoring, data logging, and timely consumption alerts, reducing unnecessary power usage.

PAPER PRESENTED

- Presented a paper at Scientium 2025, Department of Science and Humanities, Kongu Engineering College.

PROJECT PRESENTED

- Presented projects at Ideathon 2025 and Technocultural Fest, Department of Electronics and Communication Engineering, Kongu Engineering College.
